New Nintendo 3DS pre-orders.Q: Standard continuous subadditive function on closed convex sets Let  $SX$  be a locally compact Hausdorff space and  $SC\subset X$  a closed convex set. Let  $SC_0=\overline{C\cap \{x\in X:|x|\leq 1\}}$  be the closed unit ball of  $SC$ . Define the following non-negative function on  $SC_0$ :  $F(x):=\inf_{\{r>0\}}\max_{\{|\hbar|\leq r\}}\left|\frac{1}{r}\{2\|x+r\hbar\|^2-\|\alpha\hbar\|^2\}\right|$ ,  $\forall x\in C_0$  where  $\|\alpha\|\geq 0$ . Let  $SF_*:C_0\rightarrow [0,\infty]$  be the mapping  $F_*(x):=\sup_{\{x^\alpha\in X^{\alpha*}\}}\angle x^\alpha,F(x)\rangle$ ,  $\forall x\in C_0$  where  $SX^*$  denotes the dual of  $SX$  (endowed with the weak- $S^*$  topology). Then  $SF_*$  is a continuous non-negative function and  $SF_*|_{(C_0\cap SC)}$  is constant for a certain closed subset  $SC\subset C$ . 82157476af
